

## Vivaldi Offset Programming

With your machine in stand by mode press and hold the boiler button for about ten seconds. The boiler light and stand by light will start flashing.

To increase the off set from +0/+8 degrees you will push the single cup button to increase the offset by 1 degree. Each time you push the single cup it will increase by one degree up to eight times. If you want to bring your offset back to zero just push your double cup button. Each time you push the double cup it will drop 1 degree until you reach zero.

To decrease the off set from -0/-8 degrees you will push the double cup button to decrease the offset by 1 degree. Each time you push the double cup it will decrease by one degree up to eight times. If you want to bring your offset back to zero just push your single cup button. Each time you push the single cup it will drop 1 degree until you reach zero.
