

## Firmware update S1 VIVALDI

Purpose: allowing the client to set a delay in the activation of the pump during the coffee delivery phase.

### SETTING :

With machine on (control-light 22 on and fixed ) press and keep pressed for 3 seconds the button ON/OFF (27), the main control light (22) and the one referring to the preset temperature are blinking (current procedure of access to the temperature and doses setting ).

Then press and keep pressed the button BOILER for 3 seconds, the leds n° 14-21 are off (pump activated simultaneously with the group); to each new pressing of the Boiler button corresponds the delay of one second for the coming into function of the pump and the leds N° 14...21 are turning on in progression to visualize the delay which has been set (ex. led 14 ON: delay of 1 second, leds 14 and 15 ON: delay of 2 seconds, etc).

It is possible to delay the coming into function of the pump for a maximum of 8 seconds (leds 14 - 21 ON).

Pressing again the BOILER button when all the leds n° 14 - 21 are ON (set delay of 8 seconds) the setting starts again from the beginning (leds n°14 - 21 OFF).

To quit the setting phase press the button ON/OFF.
